The **GOLD** Standard in
Anti-Pathogenic & Antiseptic Wound Care™

**INNOVATIVE TECHNOLOGY AWARD
VETTED BY NOVATION WOUND COUNCIL**

C the *difference* in **BIOCENCE**

A botanical antiseptic effective in the eradication of pathogens including antibiotic resistant bacteria, viruses, mold and fungi. 99.9% kill rate at 0 to 30 seconds, leaving healthy cells intact and unaffected.

“Biocene has been hand-selected by Novation’s Wound Council, which consists of seasoned WOCN’s and clinicians, to receive an Innovative Technology award because the Council concluded unanimously that the product demonstrates improved clinical outcomes to patients and there are no other similar products on the market.”

***Novation’s Wound Council**

BIOCENCE

© 2014 Copyright Biocene Technology
All Rights Reserved

Protect yourself • Protect the patient • Protect the hospital™

1. Helping hospitals achieve improved patient care outcomes. ie: **wound care** technologies designed to speed healing time and prevent complications common with extensive tissue damage.
2. In the patient safety area, evaluating new products designed to prevent 'never events,' such as **hospital acquired infections (HAI's)** or surgical suite errors.
3. There also is an emphasis on heightened methods of **protection for the health care worker.**

Biocene® Is Such A Technology, And So Much More

Made In the USA; From the USA; Clinical Efficacy and Safety proven In the USA

Wound Care:

Whether acute or chronic, wound healing is predicated on two axiomatic absolutes:

- a. **Oxygenation** and
- b. **Effective Asepsis.**

An ideal application for wound care is a product line which gives effective and validated, "selective antimicrobial, anti-pathogenic, pan-microbiocidal" activities; one which will not create a resistance modality during extended usage and one which is eco/bio-friendly with confirmation in repetitive BSL 2-4 laboratory testing to eradicate, within 30 seconds or less, all microbes within the four (4) most responsible pathogenic, disease-generating, bacterial Phyla, ie: Proteobacteria, Actinobacteria, Spirochaeta and Bacteroides, Firmicutes.

Biocene is the only "**Botanical OTC Antiseptic Drug**" manufactured in the USA and the only OTC antiseptic drug granted approval for registry by the FDA to be listed as a "**Multi-use (soft tissue injuries and wounds)**, Category I, Topical OTC Antiseptic. The inordinate numbers of diabetic patients in this country with their significant Low Leg Syndromes, proclivity to tissue breakdown with resultant ulcerations and the mortality/morbidity "Pressure-Point" ulceration' statistics of Assisted Care Facilities and SNFU's, create a seemingly, limitless source of wound care demands with infectious co-morbidities and an escalation of "untreatable" lesions and their resultant amputation procedures; ALL engendering more post-op wound healing requirements and potentials for infection, disease and possible death.

Biocene has successfully treated and healed a number of "scheduled for amputation," diabetic patients and the patient salvation of no post-op recovery, pain and marked immobility, along with significantly reduced patient and hospital costs are enormous.

Biocene clinically effective "selective microbial/antimicrobial" player in this national, armageddon of diabetic wound care, acute and chronic, suppressing disease and healing infected wounds.

Hospital-acquired infections:

Hospital-acquired infections will be effectively suppressed, and possibly eradicated, if new and novel intra-facility protocols would be instituted and accurately followed, utilizing applicable and safe “**selective**” antimicrobial agents.

From an Emergency Room admission to care-giver fomitic contamination, hand-to-hand passage (horizontal contamination) of MDRO’s (Multi-drug resistant organisms) between care-givers and between them and their patients, all help create the continual “perfect storm” for HAI escalation and infection/disease/death rates in the USA.

Biocence Technology offers a line of OTC and non-OTC “Botanical” products which are clinically adapted to personal, hygienic usage, structure and equipment wipe-down and isolation room/facility-fogging treatments.

Biocence Spray/Serum are the only “Botanical OTC Antiseptic Drugs” manufactured in the USA and granted approval for registry by the FDA to be listed as a “Multi-use, Category I, Topical OTC Antiseptics.”

Biocence is “**Pan-Microbiocidal and Sporicidal.**” (Bacteria, Vegetative and Sporiforms; Pathogenic Fungi and Viral Groups, I-VII). All 3rd party, independent laboratory data have demonstrated a “cidal” effect within 30 seconds or less (Majority on contact.).

Protection for Health Care Providers:

With the logarithmic escalation of global antimicrobial resistance and no new synthetic and reductionistic-antibiotic or antiviral products visible in the near future, the platform for infection and disease reduction is “**Prevention Therapy.**”

This new model protocol is designed for **Therapy** or **Treatment** of animate (epithelial surfaces) and inanimate (room structures, equipment, etc.) surfaces, potentially contaminated with disease-causing pathogens or opportunistic pathogens, effectively (pan-biocidal) and safely with the concomitant Prevention of the infections/diseases inherent in those contaminating microbes. Biocence answers this enigmatic medico-societal dilemma, effectively and with clinical scholarship.

Biocence answers this enigmatic medico-societal dilemma, effectively and with scholarship.

Peer Review History with Biocence®

In 2004, Dr. John Heggers, Director of the BSL 4 laboratory in Galveston, Texas, a branch of the University of Texas Medical System and Clinical Investigator/Researcher at the Shriner's Childrens' Burn Center in Galveston, Texas, submitted an article to the Journal of Burns and Wounds. Dr. Steve Milner was the Editor of JBW at the time and also Director of the Children's Burn Center at Johns Hopkins in Baltimore, MD. The article, "Combating Anthrax: The Anti- Infective Armamentarium," was accepted by the JBW peer-review board of professionals, analyzing data on the BGP (now Biocence) efficacy in the laboratory against the Ames and Sternes strains of *B. anthracis*, both vegetative and spore forms. A letter from Dr. Milner to Dr. Heggers regarding the article stated that he (Dr. Steve Milner) was very impressed with the methodology and the results.

In 2005, Dr. Heggers, PhD., FAAM, BCCLD (AAB) and a DOJ Agent User, and the others in authorship of the article stated above, were contacted by the HHS and requested a meeting with Tommy Thompson, then Director of the HHS, the incoming Director, Mr. Michael Leavitt, former Governor of Utah and 8 other individuals: PhD's, Researchers and HHS board fellows. The 6 hour intense critique of Dr. Hegger's findings and laboratory methodology at the BSL 4 laboratory in Galveston, was the epitome of a "Peer Review." At the conclusion of the meeting, the census was that the methodology was accurate, correct and infallible. The clinical results were impeccable and nothing short of miraculous. It was at that juncture that a pharmaceutical "OTC" journey began for Biocence Technology.

In 2011, a laboratory study and peer review of methodology was done at ATS, a BSL 3 laboratory in Eaton, MN. The study was to establish clinical efficacy of the Biocence Botanical Complex (Biocence Spray) against the Gr. V, -/ssRNA Family Orthomyxoviridae, Genus, Influenza A, Subtype H1N1. The results were shocking to the investigators at the laboratory in that they had never seen a "botanical" product have such immediate "cidality" (killing effect). Also unique and captivating was the "selective antimicrobial and anti-pathogenic" activities of the complex. All cells infected with the H1N1 virus were killed within 30 seconds; but the control cell culture, infected with a benign bacteriophage, remained healthy and metabolically functional. These results were reviewed intensely by the director of the laboratory and he signed off on the methodology and the validation of the study results.

In 2013, Novation, the largest GPO in the USA, and serving 85% of medical facilities throughout the USA with a membership base of 65,000 health care professionals, "vetted" the company (Biocence Technology BGP LLC), critiquing and analyzing peer review data, laboratory study data and all other accumulated data, ie: those data scientifically validated and those empirical and observational. They stated that "Biocence has been handselected by Novation's Wound Council, which consists of seasoned WOCN's and clinicians, to receive an Innovative Technology award because the Council concluded that the product demonstrates improved clinical outcomes to patients and there are no other similar products on the market." Biocence is a truly remarkable product technology and Biocence Technology was invited to present and participate in the Novation Expo for new Innovative Technologies in Irving, Texas, in October 2013.

After this Expo event, a more complete comprehension of what Biocence was understood and absorbed by the Novation company officials; its innumerable clinical applications throughout the health care industry were recognized by health care professionals, researchers and administrative personnel which culminated in a phone call that stated that Biocence received a 100% approval rating from the Novation Wound Council, which consist of seasoned WOCN's and clinicians healthcare professionals associated with the Burn and Wound Care market were requesting an immediate "inclusion into health care facilities nationwide."

Biocene_®

The Only FDA-registered, Multi-Functional, “Multi-Use,” Selective Antimicrobial, Anti-pathogen, Eco/Bio-Friendly “Botanical OTC Antiseptic Drug,” manufactured in the USA.

Preface

Biocene is the only “All-Natural and Green,” “Botanical OTC Antiseptic Drug,” granted approval by the FDA to be listed as a “Multi-Use Category 1 OTC Topical Antiseptic.” All the components of the Biocene Botanical Complex are GRAS/E status (Generally Recognized as Safe and Effective) by the FDA; to date, in BSL 2-4 laboratories, All Microbes, ie: Gm. Pos/Neg Bacteria (aerobic/anaerobic, cocci/bacilli/sporiforms), all strains of MRSA, Viruses in Gr. 1-V11 (including H1N1, Ebola, HIV, HSV, HPV, Pox, Enveloped and Non- Enveloped, Single/Double Stranded RNA/DNA viruses), Fungi and Molds, have been killed in 30 seconds or less with the large majority, “Exploding On Contact.” All Repeat Insult Patch Tests (RIPT or in-vivo tests) on men, women and children of all ethnic skin types and all age groups have been negative and are website listed.

- Biocene is the only “All-Natural and Green,” Botanical OTC Antiseptic Drug manufactured in the USA. Biocene is not an alcohol-dominant antiseptic, a detergent or soap. Biocene is not a disinfectant which is EPA controlled. Biocene is the only product granted approval for registry by the FDA (NDC [National Drug Code] #59998), to be listed as “Multi-Use” (Soft tissue wounds) Category I [Safe and Effective Medicinal Product], OTC [Over-The-Counter] Topical Antiseptic.
- Biocene is the only antiseptic, FDA-registered or not, that has 100% negative adverse affects in any of its R.I.P. tests [Repeat Insult Patch] tests on all ethnic skin types, full-age range and both genders. A “RIPT” is where a product is applied to the skin of an individual in three phases: uncovered, covered, partial occlusion and occluded.
- Biocene is the epitome of Active Prevention or “Preventative Therapy,” ie: Therapeutic applications with concomitant Prevention of the inherent diseases recognized with the contaminating, infecting epithelial, micro-organisms. (Duality of Intent)
- Biocene is the only “selective antimicrobial” product, FDA-registered or not, that has demonstrated “0” kill time (on contact) on all Nosocomial (Hospital-acquired/Health Care-associated) and Community-acquired (CA) MRSA (Methicillin-resistant Staphylococcus aureus), Invasive MRSA, GRSA (Glycopeptide Resistant S. aureus), VRSA (Vancomycin-Resistant Staphylococcus aureus) and MDRA (Multi-Drug resistant Acinetobacter baumannii) and Caliciviridae/Norovirus and the new class of “Super-Bug, the NDM1 gene-carrying microbes (New Delhi Metallo-beta-lactamase), carbapenemase producing E.coli and Klebsiella bacteria. (CRE, CRKP)
- Biocene is safe to use on children and animals.
- Biocene has shown in BSL 2, 3 and 4 Microbiological laboratories the “cidal” activities against >800 microbes, ie: aerobic/anaerobic cocci/bacilli, Gm Pos/Gm.Neg.; Fungi and Fungiform organisms, “Weaponized” [sporiform with increased virulence, infectivity and longevity] Ames and Sterne strains of Bacillus anthracis (Anthrax), Ebola and HIV and Pox viruses (Dual Domain and Viral Gr. I-VII). These studies were headed-up by a leading Clinical Microbiologist, Immuno-Pathologist and Consultant to the US Government and DOJ Select Agent User.

The Biocence Botanical Complex is a composite of numerous anti-nutritive ingredients. The “coordinative frequency footprint” of the BBC creates a broad, vibrational, energy confluence (Energy-Medicine). In the last 8 years, there has not been one recognized “resistant” microbe to this complex and the probability that resistance by any microbial pathogen or opportunistic pathogen will develop in the next decade or longer is distantly remote.

Clinical and Hygienic Application Venues

- a. Intra-hospital Biocence Spray applications: Pre and Post operative surgical-area spray; cutaneous preparation for venipunctures; arterial and/or venous line puncture site applications. Frequent usage of the Spray or Lotion by health care provider and the patient population will help markedly reduce lateral or horizontal transfer of potential pathogenic contaminants between providers and patients.
- b. Military returning from the Middle East theatres; Spray-down to help eradicate AB (*A. baumannii*) Estimates state that 40-45% of returning military personnel carry AB.
- c. Prevention of Secondary bacterial, pathogenic infections often associated with Cutaneous Leishmaniasis (*Acinetobacter baumannii*), *Staphylococcus aureus*, Beta-Hemolytic Streptococcus spp. (Group A/B)
- d. Intra and extra-health care facility utilization of both Biocence Spray and Lotion by health care providers, understanding Prevention Therapy, ie: Therapeutic epithelial application to treat (eradicate) pathogenic contaminants, concomitantly preventing the inherent infections/diseases associated with these micro-organisms. Daily effective hand washing hygiene with the inclusion of an effective non-alcohol based, FDA-registered, “selective antimicrobial, anti-pathogen Botanical OTC Antiseptic Drug” is absolutely essential to help suppress and help eradicate the onslaught of antimicrobial resistant microbes creating the epidemic of hospital acquired infections (HAI’s) with their associated escalating death rates in US hospitals.
- e. In-Hospital application, Wound Care facility or at-home therapy, utilizing both the Biocence Spray and Lotion in created protocols for acute and chronic wound care, used with bandage changes, bandage soaking and interval spray applications via protocol.

Biocence Technology was awarded a “New Technology” contract for its Third Party Certified Anti-Pathogenic Botanical Multi-Use Prevention and Treatment Technology. Biocence was approved by Novation’s Wound Care Council. “Biocence has been hand-selected by Novation’s Wound Council, which consists of seasoned WOCN’s and clinicians, to receive an Innovative Technology award because the Council concluded that the product demonstrates improved clinical outcomes to patients and there are no other similar products on the market.”

In the fall of 2013, Biocence Technology presented its technology via its spray product to Novation’s New Technology Expo and to the Novation Wound Care Council. After hearing from CEO, its Medical Director and selective testing of the Biocence product, and then vetted by the Wound Care Council it was voted unanimously that Novation should award Biocence Technology a New Technology award.

Application Number: part356
Route Name: TOPICAL
Substance Name: EUCALYPTOL; THYMOL
Package Description : 118 mL in 1 BOTTLE, SPRAY (59998-102-14)
Pharm Class: N/A
DEA: N/A
Labeler Name: Bio-Germ Protection LLC
Start date: 10-26-2012 / End date: N/A

Conclusion

*Antimicrobial resistance (AMR) within a wide range of infectious agents is a growing public health threat of broad concern to countries and multiple sectors. Increasingly, governments around the world are beginning to pay attention to a problem so serious that it threatens the achievements of modern medicine. A post-antibiotic era in which common infections and minor injuries can kill far from being an apocalyptic fantasy, is instead a very real possibility for the 21st century.

*WHO Library Cataloguing-in-Publication Data Antimicrobial resistance: global report on surveillance 2014

Medicines Made in India Set Off Safety Worries

By GARDINER HARRIS FEB. 14, 2014 (the following are inserts from the NY Times)

NEW DELHI — India, the second-largest exporter of over-the-counter and prescription drugs to the United States, is coming under increased scrutiny by American regulators for safety lapses, falsified drug test results and selling fake medicines.

India's pharmaceutical industry supplies 40 percent of over-the-counter and generic prescription drugs consumed in the United States, so the increased scrutiny could have profound implications for American consumers.

F.D.A. Investigators are blitzing Indian drug plants, financing the inspections with some of the roughly \$300 million in annual fees from generic drug makers collected as part of a 2012 law requiring increased scrutiny of overseas plants. The agency inspected 160 Indian drug plants last year, three times as many as in 2009. The increased scrutiny has led to a flood of new penalties, including half of the warning letters the agency issued last year to drug makers.

Dr. Hamburg was met by Indian officials and executives who, shocked by recent F.D.A. export bans of generic versions of popular medicines — like the acne drug Acutane, the pain drug Neurontin and the antibiotic Cipro — that the F.D.A. determined were adulterated, suspect that she is just protecting a domestic industry from cheaper imports.

Ranbaxy, one of India's biggest drug manufacturers, pleaded guilty to felony charges and paid a \$500 million fine last year, the largest ever levied against a generic company. And many worry that worse is in store.

"If I have to follow U.S. standards in inspecting facilities supplying to the Indian market," G. N. Singh, India's top drug regulator, said in a recent interview with an Indian newspaper, "we will have to shut almost all of those."

The unease culminated Tuesday when a top executive at Ranbaxy — which has repeatedly been caught lying to the F.D.A. and found to have conditions such as files "too numerous to count" in critical plant areas — pleaded with Dr. Hamburg at a private meeting with other drug executives to allow his products into the United States so that the company could more easily pay for fines. She politely declined.

The World Health Organization estimated that one in five drugs made in India are fakes. A 2010 survey of New Delhi pharmacies found that 12 percent of sampled drugs were serious.

In one recent example, counterfeit medicines at a pediatric hospital in Kashmir are now suspected of playing a role in hundreds of infant deaths there in recent years.

A widely used antibiotic was found to contain no active ingredient after being randomly tested in a government lab. The test was kept secret for nearly a year while 100,000 useless pills continued to be dispensed.

More tests of hospital medicines found dozens more that were substandard, including a crucial intravenous antibiotic used in sick infants.

"Some of the fake tablets were used by pregnant women in the post-surgical prevention of infections," said Dr. M. Ishaaq Geer, senior assistant professor of pharmacology at the University of Kashmir. "That's very serious."

For Dr. Hamburg, the trip is part of a long-running effort to create a global network of drug and food regulators to help scrutinize the growing flood of products coming into the United States, including 80 percent of the seafood consumed in the United States, 50 percent of the fresh fruit, 20 percent of the vegetables and the vast majority of drugs.

She has gone to conclaves of regulators from Europe and elsewhere to coordinate policing, but Indian officials have so far not attended such meetings.

But Benjamin Mwesige, a pharmacist at the Uganda Cancer Institute in Kampala, said in an interview in July that the institute had stopped buying cancer drugs from India in 2011 because it had received shipments of drugs that turned out to be counterfeit and inactive, with Cipro labels that Mr. Mwesige believed were forged.

He became suspicious when doctors began seeing chemotherapy patients whose cancer showed none of the expected responses to the drugs — and who also had none of the usual side effects. The drugs that had been prescribed were among the mainstays of cancer treatment — methotrexate, docetaxel and vinorelbine. Laboratory tests confirmed that the drugs were bogus, and Mr. Mwesige estimated that in 2011 20 percent of the drugs that the institute bought were counterfeit.

The making of medicines that have been on the market at least four years is overseen by state health departments, many of which are corrupt or lack the expertise to oversee a sophisticated industry. Despite the flood of counterfeit drugs, Mr. Singh, India's top drug regulator, warned in meetings with the F.D.A. of the risk of overregulation.

This absence of oversight, however, is a central reason India's pharmaceutical industry has been so profitable.

"I'm a great nationalist, an Indian first and last," Dr. Hamied said. "But companies like Cipla are looking to expand their businesses abroad and not in India."

American businesses and F.D.A. officials are just as concerned about the quality of drugs coming out of China, but the F.D.A.'s efforts to increase inspections there have so far been frustrated by the Chinese government.

"China is the source of some of the largest counterfeit manufacturing operations that we find globally," said John P. Clark, Pfizer's chief security officer, who added that Chinese authorities were cooperative.

Using its new revenues, the F.D.A. tried to bolster its staff in China in February 2012. But the Chinese government has so far failed to provide the necessary visas despite an announced agreement in December 2012 during a visit by Vice President Joseph R. Biden Jr., said Erica Jefferson, an F.D.A. spokeswoman.

The United States has become so dependent on Chinese imports, however, that the F.D.A. may not be able to do much about the Chinese refusal. The crucial ingredients for nearly all antibiotics, steroids and many other lifesaving drugs are now made exclusively in China.

The above document are inserts from a larger article published in the NY Times.

What Medical Professionals Are Saying About Biocence.

Biocence technology is a scientifically-proven and validated answer to both intra-and extra-facility cross-contamination and clinical effectiveness in the treatment of acute and chronic, infective wound care and infectious disease prevention. Not in recent history has a product technology been so perfectly adaptive and applicable to the growth-acceleration in the clinical epidemics seen with acute and chronic wound care. With the logarithmic escalation of this draining, financial and life-threatening, disease-theater and the continuous creation of antimicrobial resistance through mutagenesis via epigenetic modulation, a new and novel clinical model is desperately needed to help suppress the two paramount issues within the wound care industry:

- A). Cross-contamination within the health caregivers' patient treatment protocols, caregiver interactions and therapeutic regimens.
- B). Clinically effective and validated Treatment/Prevention (Duality of Intent or Prevention Therapy) applications that have been and continue to be demonstrated in repetitive laboratory-testing validation.

The introduction of **Biocence**, a 3rd party, BSL 2, 3 and 4 laboratory validated, "selective, anti-pathogen, pan-microbiocidal" product, FDA-registered and listed as a "Multi-use, Category I, Topical OTC Antiseptic," the only Botanical OTC Antiseptic Drug manufactured in the USA, makes available a proven stop-gap measure in this war on the global escalation of antimicrobial resistance and the pandemic of microbial mutagenesis. Biocence is not a synthetic, reductionistic, prescription pharmaceutical or a bacteriophage modality; it is a botanical complex that has shown effective eradication of Dual Domain and Viral Grs. I-VII microbes, safely and with continued efficacy through active Prevention Therapy. Biocence is available and it is here.

I have now been using Biocence for my patients for over a year. I have several cases where the application of this compound has resulted in improvement and resolution of skin infections caused by MRSA (i.e. Methicillin Resistant Staph Auereus).

In addition, I have also used it with success with patients who have an indwelling gastric tube for infections that occur around the opening.

I recommend it highly as a safe and effective treatment for these conditions and will continue to use it on our patients as well.

Sincerely,

Ric S.Garrison, M.D.

Biocence has been hand selected by Novations Wound Council, which consist of seasoned WOCN nurses and clinicians to receive an Innovation Technology award because of the Council concluded that the product (Biocence) demonstrates improved clinical outcome to patients and there are no other similar products on the market.

***Novation's Wound Council**

To whom it my concern,

Biocence was tested in MQL laboratories for the last several months. For Biocence project, we were studying antimicrobial activity against different groups of microorganisms. Microorganisms which are resistant to methycillin and vancomycin were our major concern. We performed challenges and "kill time" tests on several different formulations of Biocence technology. The product showed extraordinary results in each case. Most particularly, the formula for the MRSA has a very fast acting and stable result when exposed to different strains for *Methycillin Resistant Staph. aureus*.

Having studied MRSA over 40 years, I believe the product may be admitted as a medical intervention against hospital infections as a very strong antimicrobial agent.

Germina Ratqaz
Senior Microbiologist

Ratqaz 12/30/08

I work in Infection Prevention at Mission Hospital, Mission Viejo. I recommended Biocence seeing dramatic improvement in an MRSA skin infection that, despite a year of topical and oral antibiotics had not been completely healed.

Thanks so much!

Regina Bardo, RN

Infection Prevention Surveillance Nurse Mission Hospital, Mission Viejo, Ca Mission Hospital, Laguna Beach, Ca

Hi Allen,

Here is a summary of the results for the virucidal efficacy testing of BGP Liquid Complex batch 2123 against Swine Influenza A (H1N1) virus in the presence of a 1% fetal bovine serum organic soil load using a virucidal suspension assay. No test virus was detected in any dilution assayed following the 30 second exposure time at room temperature (25.0°C). A ≥99.97% reduction in viral titer was demonstrated as compared to the titer of the virus control. The log reduction in viral titer was $\geq 3.5 \log_{10}$. All controls were valid. These results are considered preliminary as our QAU has not yet reviewed the completed study file. Karen will be back in the office on Tuesday if you have any further questions regarding this test or future virucidal testing.

Best regards,
Kelly

Thank you for your contribution of the topical and spray Biocence to Legacy Cottage. We are a 24 hour HIV hospice home health care facility located in Dallas TX. We currently house 7 residents and are grateful for the many uses Biocence provides both staff and individuals living at Legacy Cottage. For our staff it provides a quick and effective way to combat germs and for our residents living with HIV it provides many uses fighting against skin infections common amongst HIV patients. We have seen instant relief and skin seems to repair quickly after applying Biocence to infected areas. We will continue to use Biocence and have been amazed at its many uses for both germs and HIV related skin irritations for our HIV patients. Again thank so much.

Warm regards,

Melissa Grove

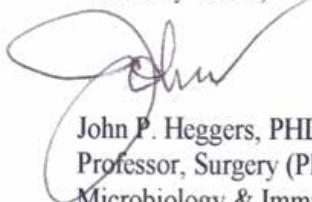

Melissa Grove

Dear Allan:

Bio-Germ Protection provides protection against *E. coli*, *K. pneumoniae*, *E. cloacae*, *P. aeruginosa*, *Acinetobacter*, *Enterococci* sp, to include VRE. Among the staphylococci both MRSA/MRSE are also susceptible. Bio-Germ Protection also is effective against Beta-hemolytic streptococci.

If you have any questions feel free to contact me at 409-770-6665.

Sincerely Yours,

John P. Heggers, PHD, FAAM, BCID (AAB)
Professor, Surgery (Plastic)
Microbiology & Immunology

To whom it my concern,

Being in the Cosmetic and Pharmaceutical industry for over 10 years, I am always asked if there is a particular preservative that I like best that is all natural and works against the USP and CTFA pathogenic organisms. I am proud and very excited to say that there is a natural botanical complex that manufacturers can rely on that works like an "Antimicrobial agent" against more than 15 different pathogenic bacteria. Not only does it destroy the five commonly tested pathogens (*Staph aureus*, *Escherichia coli*, *Aspergillus niger*, *Candida albicans* and *Pseudomonas aeruginosa*) it also is able to destroy several pathogens less than 30 seconds of contact time! In fact, the results observed during our laboratory studies were so incredible that we increased the level of the organisms inoculated to see if the Biocence botanical complex was able to destroy more than the commonly inoculated 1.0×10^6 levels. To our amazement, the results were repeatable.

When the product was brought to our laboratory, it was being tested as a hospital reagent to help prevent the spread of *Methycillin Resistant Staph. aureus*. I was so excited about the product that I was able to convince BGP to also bring it to the Cosmetic and Pharmaceutical world. I believe our industry needed something natural yet effective against bacteria; especially since organisms adapt to their environment at an extremely rapid pace. Preservatives are slowly losing their effectiveness in the Cosmetic and Pharmaceutical world as they are adapting to the formula and new preservatives, especially natural, are needed to keep the formulas bacteria free. The majority of the preservatives used in the industry are highly toxic and cancer causing.

Preservatives are important to our quickly changing world. If we can have botanical agents that can serve as a preservative and help us be healthy at the same time, this is truly a revolution in the 21st century. My team and I are honored to be part of BGP's Biocence technology. I believe we can not only save lives but also develop products using healthy and more natural ingredient using Biocence botanical complex for our men, women and the children of tomorrow.

Dear Allen,

Thank you for the generous donation of antiseptic spray and lotion this past May. When the call went out to encourage hand washing during the swine flu out break, you came through. We made it available to teachers and students and feel Biocence made a difference. In a public school setting, germs can pass quickly from person to person and proper hygiene is our paramount concern.

Even though your product is less well-known than national brands, we feel that it is a safe product because your sanitizing agent contains no alcohol. Alcohol in any form on a school campus has potentially dangerous consequences. Alcohol consumed or applied topically can damage healthy tissue. The Desert Willow community appreciates your efforts at keeping us safe.

Thank you again for stepping up and answering the call.

Sincerely,

Thomas Pitts
Principal

Dear Fellow Colleagues:

The report published studies in The Journal of Burn & Wounds 12/6/04 titled "Combating Anthrax" "The Anti-Infective Armamentarium" has clearly shown that the efforts of your team in putting the formula together in the "Bio-Germ Protection" products details the success in eradicating the anthrax bug, as well as we believe will be successful against Smallpox, the Plague, and other pathogens possibly used by terrorist. We have found it to be extremely effective against a majority of Enterobacteriae, otherwise known as the gram-negative organisms isolated from the gastrointestinal tract, which include non-enterics such as *Pseudomonas aeruginosa*. This product is also effective against the staphylococci and streptococci to include VRE. The product also promotes wound healing as an effective antibacterial.

What I find most interesting and unique in the Bio-Germ Protection formulations is that it can be used not only for cutaneous protection and or infection but has application for preventing or treatment of inhalation injuries as an aerosol. We have shown that the Bio-Germ Protection in-vitro environment is bactericidal against both the Ames & Sterns strains of *Bacillus anthracis* in several replicate studies.

Dear Allan:

On behalf of Maranatha High School Athletics, I would like to thank you for your generous sponsorship of Biocence for our football team. As an athletic trainer, I am well aware of the need to take proactive measures in fighting infectious diseases. Your product, along with the education you have provided our athletes, has been a blessing for our school. And your sponsorship has been a godsend – thank you.

You will be pleased to know that all of our athletes continue to disinfect their equipment and all of their wounds with Biocence. We have even extended the use of the product for the daily cleaning of all of our weight room equipment. Your product is becoming a household name at our school and among our students' families. My prayer is that your product becomes a household name for all families around the United States.

Again, thank you for your sponsorship.

Best regards,

Tony Peña, M.Ed., ATC

Dear Allan,

As the Director of Wheelchair Sports at Rancho Los Amigos National Rehabilitation Center, I would like to express my appreciation for your generous donation of Biocence to our wheelchair basketball team. The two cases of Biocence you provided us with were quickly emptied and our athletes are excited about employing the many applications you discussed. We found the in-service that you and Dr. Chapman provided fascinating. Biocence is an especially interesting concept to us, as we regularly make contact with the tire which must have an incredible level of bacteria.

Sincerely,

Lisa Hilborn

Sir,

A thank you once again for an additional two cases of antiseptic spray and lotion that you provided for use by our squadron. Your kindness is especially appreciated during this particularly vulnerable time of colds, flu, and swine flu.

As the co-planner of the Group 6 Aviation Camp next month, I have taken a case of Biocence to our base camp for use by our medical officer. We are expecting at least 24 cadets and eight adults for a total of nine days. I am certain that your product will come in very handy.

Thank you again for your sponsorship and donation. It is very thoughtful of you.

What The Everyday Users Have To Say About Biocene.

A fantastic antimicrobial for the 21st Century : Stefany Bay area, CA.

My first experience with Biocene was when I suffered a deep, dog bite. A friend gave me a bottle of Biocene and I used it daily in and around the wound. Both the physician and myself were surprised at the rapid healing time. I have used Biocene in a nasal spray, sublingually, in a humidifier and in capsules for a large variety of clinical issues with phenomenal success. The Biocene Spray has been utilized for various cuts, scrapes and other irritations/rashes on myself and my children and grand-children, as well as a daily "hand sanitizer." When my cat was suffering intestinal issues, I sprayed Biocene into his water and the issues cleared up in 2 days.. Biocene is an integral part of my family's health and well-being.

Incredible product! : Tallecoo1 Rowland Heights, CA

My first experience with Biocene was when I suffered a deep, dog bite. A friend gave me a bottle of Biocene and I used it daily in and around the wound. Both the physician and myself were surprised at the rapid

Awesome results : Steelers Los Angeles, CA

My daughter who played water polo came home with painful blisters on her toe. The next day her toe looked worse and the area with blisters had doubled and she was complaining of increased pain. Based on photos and what I have read; I came to the conclusion it was MRSA. I sprayed Biocene on the affected toe and within minutes she felt pain free. The following morning there was an obvious improvement on the area. After only two applications and two days later the blisters were no longer visible and there has not been a reoccurrence. I didn't know what to expect but was pleasantly surprised as to how effective and timely Biocene works. I highly recommend Biocene and have used it for various applications including sore throats athletes foot and acne. It works!

Awesome Multi Use Product! : Angelam Frisco, TX

We are a family of 5 who has been using Biocene for several years. We've been able to drastically reduce the need for antibiotics as a result of using Biocene internally. We spray it under the tongue (2x's a day) to ward off strep throat & sinus infections when we feel them coming on (it can be used mildly as a nasal rinse as well). The number of ear infections our kids get has been reduced (put a little Biocene on a q-tip & wipe around ear canal). It's cleared up diaper rashes. We use it on scrapes & cuts to keep infections from setting in & to speed up the healing process. It's been used to prepare for surgeries multiple times (apply to surgical area a few times a day for 3 or so days leading up to surgery to prevent hospital acquired MRSA). My husband travels frequently & keeps a bottle handy to spray down his head rest on the plane, as well as the most germ prone areas of his hotel room. And last but not least, we use this as a hand sanitizer. I can't say enough about the effectiveness & number of uses for this all natural product. Angela M

My family and I have used Biocene for the past 2 years and it's without a doubt the best antiseptic on the market. It's great for cuts and bruises. A few weeks ago I accidentally cut myself slicing some fruit. Needless to say I was upset and bleeding all over the country. I wiped the wound off and applied Biocene to the cut. I let it air dry for a couple minutes and then reapplied. I applied it several times during the course of that day and each time let it air dry. I was amazed at the results from the first application. It definitely helped relieve the pain from the cut but also seemed to start healing the cut immediately as if adding a protective layer over the wounded area. I continued using Biocene on the cut for 2 days straight and by the second or 3rd day it felt great and was pretty much back to normal. It's all natural but works fast. Like all natural ointments or medicines you have to apply it often and consistently to realize its full effect. The product also works great as a disinfectant for eliminating germs and bacteria of all kinds. My grandmother was diagnosed with C-diff which is a nasty staph infection. She got this as a result of a hospital stay after having a heart attack. In order to treat the C-diff we used Biocene everyday to fight off infection and keep her room free from germs. She also used it religiously on her hands and we sprayed it anywhere that germs could spread during that time. It helped tremendously. C-diff is very contagious and since Biocene kills staph infection on contact, it was a great thing to have at that time. I highly recommend it!

Biocene is a true noble product among thousands of imposters, December 6, 2010

By Loveinaction -

This review is from: Biocene Antiseptic Multi-use Spray Mist (Health and Beauty)

I ordered the Biocene spray just to keep on hand so if I did encounter a break out from the staph infection I contracted 6 years ago from providing home care for a family member recovering from a brain tumor removal procedure, I would have it on hand and ready to use at the first sign of an outbreak.

Approx. 3 weeks after receiving the product I had an infection show up on my thigh. I sprayed it on the noticeable red spot before it progressed to the surface, let it air dry and then reapplied it again. I left for an out of town job a few hours later and had forgot to pack the Biocene. The following afternoon I remembered to take a look at the flare up and much to my surprise the red spot was gone. I never encountered any itching, pain or the common out come of the red spot turning into an large pimple and, best of all no scaring that is usually left behind after the typical two week healing process. The outcome inspired me to contact the Biocene company directly and express my gratitude and during the conversation I mentioned I had suffered from a nasal infection for 15 plus years that made the inside and outside edges of my nostrils inflamed and constantly scabbed over. They suggested I try the Biocene nasal spray. I received the Biocene nasal spray a few days later and immediately opened the box and administered the spray as the bottle suggested. Just for curiosity, I only used the nasal spray once to see what the outcome might be. Once again much to my surprise, within 24 hrs all the inflamed sore areas and the scabs were gone. That was two months ago and I'm still free of the pain, and sores that I lived with for 15 years plus. I do suggest using the product as suggested to achieve the best possible outcome. I just like to experiment with suggested dosages and frequencies so I can determine what amount works best for my own biology. I don't know when or if either infection will come back, but if it does I know I can make a choice to use a simple product made from simple things of the earth and experience quick positive results without any pain or discomfort. Biocene is a king among all the jesters in the market place and made from 100% plant products. What a saving grace for humanity and the environment. If your still using alcohol based hand disinfectants produced from too many products that you can't even begin to pronounce, I suggest filing them in the bin and procure a product that works and works fast. I always champion products that meet or exceed their claims and Biocene is one of those products that has the potential to change the world without using unnatural petrochemical derivatives.

Biocene Makes sense with fantastic results; naturally, June 13, 2012 By Gary Okupant "garyOk" (Akron, Ohio United States)

I used on a rash that became infected. Pain free and very cool, even as the rash is in a place that is constantly rubbed on. I've used many other products. This stuff is unbelievably fast and wonderful. Highly recommend; as it's all natural too! Akron Ohio.

This review is from: Biocene Antiseptic Multi-use Spray Mist (Health and Beauty) I use this product whenever I'm sick. I usually always get strep throat and this product works absolute wonders for me.

By SeeJai

Biocene Antiseptic Multi-use Spray Mist (Health and Beauty) Great for dogs too ... my pooch is very old and was not feeling too good. I thought the day had come as he would not eat and would not even go for walks. The night before I was about to take him to the vet, I sprayed Biocene in his water dish. He drunk water through the night and he seemed to like it. By the time he woke up the following morning, he was back to his old self and moving around again like he was a puppy! Save me \$\$ from vet bill!!!

By TAPHOUSE - As a parent of 3 I'm all too familiar with bandaging cuts and scrapes. I was not aware of MRSA until some of our friends were infected with "this common antibiotic-resistant bacterium that causes skin and soft-tissue infections in healthy people, but can lead to invasive, sometimes fatal, infections in seriously sick patients and in those with weak immune systems"(Dr. Aaron Milstone of the Johns Hopkins Children Center). The MRSA wreaked havoc on their daughter and then both parents leaving scars on all of them.

Biocene is amazing and I recommend it to every parent I meet. This antiseptic spray is an "all natural, organic botanical antimicrobial drug" and it kills the "super bugs" including MRSA on contact. This product also exceeded the FDA standards as a topical antiseptic. The best part is it is alcohol free so it won't dry out your skin.

I replace my 4oz bottle when I change the batteries in my smoke detectors. I sleep better at night (well, when my twins let me sleep through the night) knowing my children are safe.

Works great., July 27, 2013 By Albert Taylor

Keeps my face clear of acne. Feels good on my skin. Also use it on my arms. I like the way it smells.

Cured strep in 1 day!, November 10, 2012 By Andrew Proctor

I use this product whenever I'm sick. I usually always get strep throat and this product works absolute wonders for me.

Vicky S Ridings

This product has saved me from multiple operations and hospital stays. Biocene does exactly what it says. In my situation...it's a life saver. ALL medical fields should know about this product and promote it.

Diana

It kills toenail fungus, staph, and many other hard to kill viruses! The fact that it is made from all natural ingredients makes it even better.

November 19, 2012 By Marci Canjura

Gave it to a friend for a staph infection. Cleared it up quicker than antibiotics. Keep it around just in case. Help other customers find the most helpful reviews

Biocene

(Coincidence or a Miracle?)

Attention: Allan Lord

I am writing this letter to share the amazing experience we had with Biocene. As you know, a year ago, my father contracted West Nile Virus. He was a healthy and strong man in his 70's, who looked like he was in his 50's. He was always taking care of his body, practicing Yoga at home, a survivor of war in Greece in his youthful days and always keeping himself very healthy. He always worked in the garden and found something to fix at home. He is a plumber by trade and has worked on many amazing projects in his younger days.

While working in the garden one day in Sun Valley, California, he began to have certain disturbing physical signs. Within a week, he couldn't walk and lost a lot of weight. I rushed him to St. Joseph Medical Center in Burbank, not knowing what was going on. The hospital ran some tests and they called his doctor. After many tests, they were not sure what he had. They quarantined the room and had him in ICU, as they thought he had meningitis. Quickly, he went into a coma and they started administering different antibiotics to him, as he had a low fever. Many specialists came to evaluate him. He was even visited by a Brain Specialist. Finally, after three weeks of waiting, we were told he had West Nile virus. Not understanding much about the West Nile virus, we were told his body needed to fight it "on its own" and there isn't anything specific they can do to help him recover. All the antibiotics were shut off, except for one. The fever was still there during that time; the doctors put a feeding tube in his stomach, as his body needed nourishment. Then they performed a procedure and placed a breathing tube into his trachea, as he was not able to breathe on his own. We weren't seeing much progress daily; he was getting worse and worse. I visited him every day. My sister took a leave of absence from her work and was at his side all day talking to him and hoping he could hear us. My other sister was traveling out of the country, so we decided to inform her of her dad's condition and suggested she return as soon as possible because we were all preparing for his imminent death. When I went home one day, my wife had mentioned using the Biocene spray. Of course we were very familiar with the amazing data it had shown and the recovery we had seen in the lab. We had some extra bottles you had generously given to us for our personal use and we decided there was nothing to lose, as his chances of survival were slim. Biocene, being a natural botanical, I was confident that there would be no harm. With your team's guidance, I started using the spray on his face and spraying it around his nose, so he can breathe in the vapors. I wiped his face and his forward daily and gave extra bottles to my sister. Slowly, we started seeing my father's hands begin to move. Not dramatically, but moving like he understood us. We went through three small bottles and I contacted you, Allen, and you again generously provided an extra case. My sister returned from abroad and we had to decide on moving him to a nursing home, as the doctors suggested, or deciding if we needed to save him from his torture as he was only living with the help of the machines. Within the week after we started using Biocene, we were seeing more responses from his body. We informed the doctors and they mentioned we couldn't use the Biocene, as it had not been clinically tested. We had many skeptics and were told that we can only bring the bottle in the hospital if we mention it is a "religious practice." So we did. After daily use

of spraying Biocene on his face, his hands, feet, forehead and spraying it in and on his breathing area, he slowly came out of the coma. It was truly a miracle!! We were told there were two other cases in the hospital and one person was slightly older than he was and passed away, while the other individual was younger (in his 60's) fighting the virus. Of course, he was not able to speak or breathe on his own; but over time and with the daily use of Biocene, we saw many amazing transformations. My sister even brushed his teeth with Biocene, as she was amazed at seeing his recovery. Eventually, they removed the feeding tube and within two months he started breathing on his own. Call it coincidence or call it miraculous Biocene. We were very fortunate to have the opportunity to obtain Biocene immediately. We went through many containers of Biocene. After two months in the hospital, my father was transferred to a hospital in the valley, as he needed therapy to walk again, as legs were not functioning adequately. He also had some dementia when he woke up and was not himself. Again, we used Biocene to clean the new hospital room and disinfect the beds and his room. We were worried he would contract some sort of hospital bacterial infection. We had Biocene by his bedside for his continual use. He mentioned he enjoyed the smell and it was pleasurable to use. So, we made him use it daily on his face, hands and feet. The hardest thing was controlling its continued place in his room, as it would always disappear. We would hide it from the nurses as one nurse had taken it and said she bought it from the store. Well, we knew it was not being sold at the stores at that time. With a lot of therapy, family support and Biocene, it's been a little over a year and my father is now home and cured. He does walk, but with a small cane for support. He does his daily exercise, so he hopes to eventually not have to use the cane. His delusional stories are gone and mentally he is the same person we had before. Unfortunately, he now looks like he is older, as his body lost a lot of weight and his right arm doesn't function as well as it used to. It is the arm in which he had all the tubes placed during his hospital stay. However, as he mentions every day, "I thank the Lord for my recovery and the opportunity for Biocene to be used on me. Call it a coincidence or call it Biocene."

With our story, I hope we are able to help others recover from similar infectious diseases.

Kindest Regards, Karo Aylozyan

Miracle Product

Title: Biocene is a miracle product!!!

June 4, 2012 was the day I had to undergo an emergency hysterectomy. It was painful and traumatic experience. As I recovered in the hospital, I thought that there could be nothing more painful than an emergency surgery until I contracted C. diff in the hospital. I suffered tremendously as I was not able to consume food without becoming violently ill. Even the aroma of food caused me to become ill. I struggled to even drink water and survived on broth for months.

The hospital staff quickly quarantined me since C. diff is highly contagious. I was given a variety of different antibiotics that only made me feel weak and further aggravated my nauseousness. My stool was tested a second time while quarantined and the C. diff persisted. I was given antibiotics through my IV since swallowing the pills made me violently ill. My symptoms of nauseousness, diarrhea, acute abdominal pain and depression only worsened. My doctor decided to release me from hospital care as she felt that I would recover quicker in a home setting. She referred me to an internal specialist.

I immediately made an appointment since the acute abdominal pain, drastic weight loss and constant diarrhea alarmed me. The specialist had very grim news for me. The doctor told me that C. diff is one of the most difficult bugs to kill and it can take several months and in some cases, years to overcome. He quickly handed me several prescriptions for a concoction of different antibiotics to combat the C. diff bug. I was instructed to make an appointment in a few weeks so he could monitor my progress and adjust my antibiotics if the C. diff persisted in my intestines.

I went home depressed but determined to overcome this disease. I had to plan my movements carefully as the C. diff had caused my intestinal tract to spasm uncontrollably which meant that I needed to have a bathroom nearby at all times. I started taking 2 different antibiotics that made me violently ill.

Thankfully, My cousin, who came by to visit me, shared with me Biocene and gave me a bottle. I stopped taking the antibiotics and began to take a few drops of Biocene 3 times a day for about 2 weeks. I was extremely nervous about swallowing the drops and stopping the prescribed medication which I had taken for 2 weeks with no change in my condition. I was desperate and decided to trust the product with the hope of regaining control of my body.

I began to feel a difference around the 3rd or 4th day of taking Biocene. The abdominal spasms subsided and I didn't have to go to the bathroom 15 times a day. I started to feel better. I couldn't believe it. Karen explained that Biocene was killing the C. diff and protecting the good bacteria my intestinal tract needed to feel healthy. I complimented the Biocene with coconut oil and probiotics since the bottles of antibiotics I took killed everything in my intestinal tract. After a few days of taking Biocene, I was able to eat real food without my body rejecting it of suffering abdominal spasms.

Biocene saved my sanity and helped me regain control of my body. I am very thankful and forever grateful for being introduced to this product. Two years have passed and I have yet to touch antibiotics. Whenever I suffered a sore throat I would reach for Biocene rather than antibiotics. My sore throat went away within a few days. Biocene is a miracle product against antibiotic resistant bacteria.

Y MacKenzie

In 2011 I was diagnosed with Chronic Bronchitis. I was prescribed different antibiotics, which only alleviated the symptoms. The pulmonary specialist prescribed two different inhalers; One for daily use morning and evening, and the other for emergencies.

My son brought me a bottle of Biocene and told me to squirt directly in my mouth twice a day or mix two tablespoons in some water and drink it. I have had no more symptoms of bronchitis for over a year now. The taste is not pleasant but the results amazing.

Eunice Waldenberger
Chino Hills, CA

Several years ago I had sinus surgery and was on antibiotics for several weeks afterward. Despite the use of antibiotics, I continued to have ongoing post-surgical sinus infections that continued for almost two years (the antibiotics provided only temporary relief). I believe it may have been a MRSA infection, although I was never tested to see if that was the case. Later, I tried a daily wheat-grass regimen for several weeks, which seemed to help but, again, it was only temporary.

Somewhere around two years following this surgery, I was given a bottle of Biocence nasal spray to try and I began using it on a daily basis. Within a short period, the infection completely cleared up and, other than an occasional cold, I have not had any congestion or infections since.

Once the nasal spray was all used, I continued to use Biocence routinely inside my nose to kill the airborne germs and viruses. I work at a school and am around sick children on a daily basis. Biocence kept me healthy and continues to do so!

Thank you, Biocence!

Dolores

By Richard E. "Dick" Stephenson, MG(Ret.), US Army

Art Johnson's son, Dale, has been brought back from certain death...Art's words...from an advanced case of MRSA...complete with compelling photography.

The applications of BIOCENCE have once again, proved, beyond any doubt whatsoever, to have effected a "miraculous 100% elimination of Dale's MRSA within seconds following application". This represents a medical treatment heretofore impossible, using every pharmaceutical possible...and remains the only remedy to MRSA known today.

No one should ever, very soon now, be unaware of BIOCENCE, and its genuinely remarkable effectiveness against virtually every known "...BAD...bacteria, germs, viruses, staphs, acne, diseases, or any other known sources of human infection. The external/internal uses are remarkably 100% free of any patient side-effects...none whatsoever.

Beyond these amazingly revolutionary, total POSITIVES of USING BIOCENCE, please also recognize that in using the fluid, there are no losses, internally, or externally of the "...GOOD...bacteria, germs, which exist in every human body..." as vital to a healthy human being..."

Greetings,

Thank you again for your patience. We have been greatly blessed by your generosity of giving us Biocene. We have found the greatest success in the gastro-intestinal illnesses. We have not seen positive results for HIV/AIDS but I still think this can be achieved. I would be thrilled to continue using and testing Biocene. I am sure we will see many more positive results. The results I am seeing for vomiting and diarrhea are amazing and this is probably the greatest health issue we have here. I would love to do more with HIV/AIDS testing. Please let me know your thoughts. Thank you again. We are so grateful. You are truly saving lives here.

God bless you.

Greetings Allan,

I am so thrilled to hear from you. We cannot thank you enough. This is such amazing news for us. I know that through Biocene we will see many more lives saved and changed. Meg Gore is my friend's sister and she is coming to visit her for Christmas. She is bringing some beds for our babies here so I know that she would be more than happy to bring the Biocene to us. Her cell number is [REDACTED] and home phone is [REDACTED]. Again we are so incredibly grateful for this! Also thank you for the documents you have attached.

God bless you.

Biocene

Test Subjects

1. Marcie Erickson – age 32, DOB April 19, 1981 December 5 2013,
Drank 5 ml at 5:00 p.m.

To treat symptoms of gastrointestinal infection that normally results in 24 hours of vomiting.
Symptoms dissipated after two hours.

December 7, 2013
Drank 5 ml at 8:30 a.m.

After symptoms of gastrointestinal infection reappeared, for example cramping in the abdomen.
Symptoms dissipated within one hour.

2. Netsanet Erickson – age 4.5 yrs, weight 38 lbs, DOB May 4, 2009 December 5 2013
Drank 1.5 ml at 7:00 p.m.
Had a fever of 103 degrees. Had a stomach cramping. Was shaking.
Symptoms subsided after one hour and did not return.

3. Naomi Erickson – 2 yrs, weight 35 lbs, DOB Oct 11, 2011 December 8 2013
Drank 2.5 ML at 8:30 AM

To treat symptoms of fever runny nose. Previously this illness would cause severe problems with asthma and breathing. One year ago she was hospitalized and on oxygen when she contracted RSV. Since then she has had oxygen levels as low as 89%.

Fever dissipated within two hours and did not return. Running nose and coughing lasted as a normal cold for five days.

4. Tigist Erickson – 12 yrs, weight 120 lbs, DOB May 12, 2002 December 12, 2013
Drank 5 ml at 4:30 p.m. and 5 ml at 7:00 a.m. December 13, 2013
Had vomited twice within one hour. Had a headache and stomach cramps similar to gastrointestinal infections.
Did not vomit again, and was completely recovered within 24 hours.

5. Dawit Grace – 2 yrs 3 mos, 24 lbs, DOB unknown December 6, 2013 – December 12, 2013
Applied on skin daily.
Use to treat sores on his skin and a sore behind his ear. The sores have become dry. The application of Biocene has helped. He had this skin problem for two months. Tried Artemisia, lotion, tea tree oil, but nothing helped until Biocene.

6. Abenezer Grace – 1 yr 2 mos., 22 lbs, DOB unknown December 6, 2013
Drank 2 ml
Used to treat gastrointestinal infection. Had vomiting and fever. Subsided after taking Biocene.

7. Deanne Knife – 35 yrs – June 22, 1978 December 6, 2013 – December 13, 2013
Sprayed 3 times/day
Used to treat ringworm. Itching subsided and ringworm has scabbed up, becoming flaky

We realize that this will take extensive testing with larger quantities and over larger periods of time which we are more than happy to do. At this point we were limited on what we could do because of the quantity that we had. As of now we have more than 100 people that would greatly benefit from the use of Biocene and from which we will continue to document.

This is just one of the hundreds would benefit from the use of Biocene.

I began using Biocence exclusively for my father's wound care in 2008. He is an uncontrolled diabetic who is on dialysis, has vascular disease and tested MRSA positive. Needless to say he does not heal well.

In 2008, despite the various oral antibiotic and wound care treatments I tried, the chronic wounds on his feet and legs refused to heal and more often than not grew worse. His doctor informed me that the last course of action was amputation.

It was then that a family friend told me about Biocence. I did some research and then figured I couldn't make it any worse, so why not. After beginning the wound care regimen, there was visible improvement within a day. The evidence of healing was often evident each time I dressed his wounds (every 6 hours). His doctor was skeptical when I took him off the traditional antibiotics and treatments, however when we returned to him 1 week later for a check up, he was amazed at the healing progress and told me to continue with the treatment. Soon thereafter he was fully healed.

Biocence is a miracle product that saved my father's legs and subsequently his life in 2008. We use it exclusively for wound care to this day and still have outstanding results.

Sincerely,

Karen D. Waldenberger

I use Biocence for everything. So does every member of my family. So does everyone I ever introduce this product to. It is the ONLY FDA approved as an OTC drug that is 100% natural botanical that is antiseptic, antifungal, anti-viral, anti-bacterial. The stuff kills all the bad stuff and none of the good; you can drink it and it won't kill friendly bacteria, but it kills all bad bugs, germs, viruses, funguses, etc. It kills E.coli, staph, strep, MRSA, anthrax, herpes, etc. It completely wipes out a sore throat almost instantly. It kills a candida infection instantly. It knocked out my dad's kidney infection in 2 doses after he suffered for days trying everything else. It kills acne. It kills foot fungus. It heals cuts and wounds safe, fast and natural. I gave a bottle to a family whose kid had a scalp infection that would never heal; healed it within days. I use it in my vegetable wash (just to be safe) I spray a bit into my laundry (just to be safe). I spray it all over my airline seat before flying and sniff a bit into my nose. I spray all over my hotel room (alcohol antiseptics are a JOKE; they don't kill anything; in fact recently, alcohol wipes were recalled from hospitals and pharmacies because they were INFECTED! This stuff literally kills on contact with no harmful chemicals and no ill effects for good germs. It is safe for kids, pets, etc. When my Doberman got a huge slash on his side, we just sprayed Biocence on him several times a day; it never got infected and healed up like a charm. When my husband is out working on "stuff" and gets his arms all cut up, it will always start to swell and hurt, unless he uses Biocence. In which case NO INFECTION. NO PAIN, no problem. If we had known about Biocence before my husband got that superbug several years ago, he could have been spared a couple of open heart surgeries! If that girl Aimee Copeland in the news right now (24 yrs old - cut leg while camping, got a superbug from the river and lost one whole leg, the other foot and two hands over it!) had a bottle of Biocence on her when that wire cut her leg, she would still have all of her limbs now. Whether you use it for prevention, or you use it for cure, NOTHING in the universe works like Biocence.

I am a registered nurse and have used Biocence for years, primarily for wound care, as an antiseptic and antibacterial with great results. About a year ago my husband suffered a severe laceration to his hand and finger using an electric hedge cutter. The wound required numerous sutures and emergency room physician was concerned about infection. The doctor recommended oral antibiotics but my husband declined. He did use Biocence several times a day and the wound healed beautifully without infection. Most importantly, Biocence kills harmful bacteria without damaging regenerative tissue. Great product!
